

Water Mass 24

Description: A deep water mass that appears at about 1300 m depth in the central Indian Ocean. With increasing depth it expands to the east. At 1500 m it encircles Australia, but bifurcates to flow into the Indian and Pacific oceans. By 1750 m depth it is confined to the Pacific Ocean and disappears to the north. Its maximum depth is about 2250 m.
